

# NEASA YOUTH INTERNSHIP PROGRAM

---

***Our intern has become an irreplaceable part of our team.***  
*We hope to participate again in the future.*

*Karen Cooney  
North Reef*

---

*With such a small financial outlay, we achieved so much!*

***The intern made a marked difference in our company*** – and by being involved in her development from never-worked-in-a-company-before-young-person, to confident-well-spoken-well-adjusted-young-lady we not only helped her to become more informed, more confident, and better equipped in dealing with day to day life, but we also benefited in the joy of helping someone!

***By making use of your initiative, we were able to add a valuable member to our staff with almost no risk to ourselves.***

*And we loved dealing with you and your team – your dedication to the project, your patient dealings with the interns – it's inspiring!*

*Thank you for your effort and time and passion!  
We need more people like you and your team in South Africa.*

*Aletia Dos Santos  
Loadtech*

---

---

***The intern has become an integral part of our company as she has established herself as a strong and independent 'employee' that has assisted in making my workload depreciate tremendously.***

*She proved that an individual could be nurtured and developed into a professional that could contribute fully to the economy of this country.*

***We were very fortunate to be part of this youth initiative and would highly recommend it.***

Rene Jacobs  
Scientific Engineering

---

***The internship program has added value to our department as we have taken some of the time consuming general administrative workload away from our engineers and allowed them to focus on their core strengths.***

*This program has allowed the opportunity for individuals to enter into the workplace and gain fist-hand experience and on-the-job training, utilising their academic training in a real-world situation.*

***I belief the program is of mutual benefit.***

*Experience is very valuable when recruiting personnel and this program is a very good vehicle to get newcomers into the workplace.*

Lance Winters  
Scientific Engineering

---

*The internship gave this young talented candidate the opportunity to be part of a great department and company.*

***The internship takes the day to day tasks and making it uncomplicated for the managers to put more focus where it is needed most.***

*In return the intern get exposure to the real world to guide them to where and how they see their interests and talents become a reality to grow in the world of business.*

Chris Steenkamp
